EDUCATION

The University of Texas at El Paso (UTEP) <i>Bachelor of Science in Computer Science, Major GPA: 3.96</i> • Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Operating Systems, Advanced OOP, Database Systems • Google Tech Exchange (Spring 2025): Algorithms & System Design, Intro to Software Engineering with GenAI, Careers in Tech • Honors & Awards: College of Engineering Dean's List, Fall 2023 – Spring 2026 • Certifications: Meta Front-End Developer Professional Certificate, Google Intro to Generative AI	Expected: May 2027 <i>El Paso, TX</i>
---	--

SKILLS

Languages: C++, Python, Java, C#, JavaScript, TypeScript, SQL Libraries: Playwright, Selenium, Pandas, NumPy, Chart.js, D3.js Frameworks: React, Express.js, Node.js, Flask, Streamlit Databases: PostgreSQL, MongoDB, Firebase Technologies: Git/GitHub, GitHub Actions, Google Cloud (BigQuery, Cloud Run), Docker, Microsoft Fabric, Kusto (KQL), .NET 8, IIS, HTML, CSS, Telemetry AI/Agentic Tools: Model Context Protocol (MCP), Copilot, Ollama, Claude Code, Codex, Cursor, Gemini, ChatGPT
--

EXPERIENCE

Microsoft <i>Software Engineering Intern – Click-to-Run (Deployment), Office Product Group</i> • Cut Office update validation feedback loop 99.9%, from 1 week of fleet telemetry to seconds, by building a C++ CLI tool that mirrors production update behavior locally • Reverse-engineered a deprecated busbar driving production update traffic; built a Kusto telemetry funnel to A/B test and feature-gate it before rollout, improving update speed and device adoption by 30% • Unlocked Copilot adoption and build-currency insights by engineering a Fabric ETL pipeline that joined two previously incompatible telemetry datasets • Independently owned all 3 projects end-to-end across a single 12-week internship, context switching between C++, KQL, and Fabric, while ramping up using AI development tooling	May – August 2026 <i>Redmond, WA</i>
Microsoft <i>Explorer Intern – Collab Services, Office Product Group</i> • Collaborated in a 3-person pod to cut document catch-up time 90% and boost user productivity 70%, building a Copilot tool that surfaces version-level changes in Office documents • Raised document comparison accuracy 70% by extending change-detection logic and optimizing LLM prompts for version-comparison tasks • Surfaced 8 critical product pain points from a 7-participant user study, driving roadmap decisions through weekly Scrum meetings with cross-functional teams • Hardened comparison reliability in C# and TypeScript through stress testing and TDD, catching edge cases before rollout	May – August 2025 <i>Redmond, WA</i>
Hunt Institute for Global Competitiveness <i>Software Engineering Intern</i> • Architected and led a 3-person team building HIBRED – a React/TypeScript, .NET 8, PostgreSQL data platform serving 1,000+ policymakers across 10+ modules on border economic indicators • Built an AI chat assistant on a self-hosted 7B-parameter Ollama LLM, giving stakeholders natural-language access to live chart data with zero database access • Eliminated SQL injection risk across all public-facing endpoints by replacing dynamic query building with parameterized queries • Automated wage data collection with a Python ETL pipeline (pandas), cutting processing time by 95% and inconsistencies by 30%, published in the Newsletter and White Paper	September 2025 – May 2026 <i>El Paso, TX</i>
Google <i>Google Tech Exchange Class of 2025, Student</i> • Shipped a fitness tracking web app to Google Cloud Run, building a Streamlit UI over BigQuery with Docker and GitHub Actions CI/CD, with a Google engineer and 3 teammates • Improved query performance 40% via BigQuery optimizations and integrated the Gemini API for personalized fitness recommendations	January – April 2025 <i>Remote</i>

PERSONAL PROJECTS

Jarv Personal Finance MCP Server <i>Python, Notion API, Model Context Protocol</i> • Cut monthly finance review time to under 60 seconds by building a custom MCP server in Python that turns voice, image, and text commands into live Notion operations • Replaced a full suite of financial tools – expense logging, budgeting, paycheck splitting – with a single AI-native interface handling 100% of workflows conversationally	March 2026
---	------------

LEADERSHIP

Google Developer Groups <i>Vice President of Operations</i> • Grew CS department event attendance 30% by leading a 10-person team across 20+ events, owning budgeting, logistics, and task delegation	January 2024 – Present <i>El Paso, TX</i>
