

GUILLERMO JIMENEZ GARCIA

guillermojiga10@gmail.com | +1 (915) 801-8073 | [portfolio](#) | github.com/mJiga | [in/guillermojiga](https://in.guillermojiga)

EDUCATION

Bachelor of Science in Computer Science

The University of Texas at El Paso (UTEP)

Expected: May 2027

Major GPA: 3.96

Relevant Coursework: Data Structures & Algorithms, Computer Architecture, Operating Systems, Advanced OOP., Database Systems

Google Tech Exchange (Spring 2025): Algorithms & System Design, Intro to Software Engineering with GenAI, Careers in Tech

Honors & Awards: College of Engineering Dean's List Fall 2023 – Spring 2026.

Certifications: Meta Front-End Developer Professional Certificate, Google Intro to Generative AI.

SKILLS

Languages: C++, Python, Java, C#, JavaScript, TypeScript, SQL

Libraries: Playwright, Selenium, Pandas, NumPy, Chart.js, D3.js

Frameworks and Databases: React, Express.js, Node.js, Flask, Streamlit, PostgreSQL, MongoDB, Firebase

Technologies: Git/GitHub, GitHub Actions, Google Cloud (BigQuery, Cloud Run), Docker, Microsoft Fabric, Kusto (KQL), .NET 8, IIS, HTML, CSS, Telemetry

AI/Agentic Tools: Model Context Protocol (MCP), Copilot, Ollama, Claude Code, Codex, Cursor, Gemini, ChatGPT

EXPERIENCE

MICROSOFT

Redmond, WA

Software Engineering Intern – Click-to-Run (Deployment), Office Product Group

May – August 2026

- Cut Office update validation feedback loop **99.9%**, from 1 week of fleet telemetry to seconds, by building a **C++ CLI tool** that mirrors production update behavior locally.
- Reverse-engineered a deprecated Office UI surface driving production update traffic; built a **Kusto** telemetry funnel to A/B test and feature-gate it before rollout, improving update speed by **30%**.
- Unlocked **Copilot** adoption and build-currency insights by engineering a **Fabric ETL pipeline** to ingest, clean, and join two previously incompatible telemetry datasets on mismatched keys.
- Independently owned all 3 projects end-to-end across a single 12-week internship, context switching between **C++**, **KQL**, and **Fabric**, while ramping up using **AI development** tooling.

MICROSOFT

Redmond, WA

Explorer Intern – Collab Services, Office Product Group

May – August 2025

- Collaborated in a 3-person pod to cut document catch-up time **90%** and boost user productivity **70%**, building a **Copilot** tool that surfaces version-level changes in Office documents.
- Raised document comparison accuracy **70%** by extending Microsoft's internal change-detection logic and optimizing **LLM prompts** for version-comparison tasks.
- Surfaced **8 critical product pain points** from a 7-participant user study, directly shaping feature prioritization through weekly **Scrum** meetings with cross-functional teams.
- Hardened comparison reliability in **C#** and **TypeScript** by writing unit and integration tests through **TDD** and stress testing, catching edge cases before rollout.

HUNT INSTITUTE FOR GLOBAL COMPETITIVENESS

El Paso, TX

Software Engineering Intern

September 2025 – May 2026

- Architected and led a 3-person team building **HIBRED** - a **React/TypeScript**, **.NET 8**, **PostgreSQL** data platform serving 1,000+ policymakers across 10+ modules on border economic indicators.
- Built an **AI chat assistant** on a self-hosted **7B-parameter Ollama LLM**, giving stakeholders natural-language access to live chart data with zero database access, rate limits, and token quotas.
- Eliminated **SQL injection** risk across all public-facing endpoints by replacing dynamic queries with a **whitelist-based parameterization pattern** for every indicator and geography filter.
- Automated wage data collection with a **Python ETL pipeline** (pandas), cutting processing time by **95%** and inconsistencies by **30%**, published in the [Newsletter](#) and [White Paper](#).

GOOGLE

Remote

Google Tech Exchange Class of 2025, Student

January – April 2025

- Shipped a fitness tracking web app to **Google Cloud Run**, building a **Streamlit** UI over **BigQuery** with **Docker** and GitHub Actions CI/CD, with a Google engineer and 3 teammates.
- Improved query performance **40%** via **BigQuery** partitioning and clustering optimizations, integrating the **Gemini API** for personalized fitness recommendations.

PERSONAL PROJECTS

Jarv Personal Finance MCP Server | Python, Notion API, Model Context Protocol

March 2026

- Cut monthly finance review time to **<60 seconds** by building a custom **MCP server** in Python that turns voice, image, and text commands into live **Notion** operations.
- Replaced a full suite of financial tools — expense logging, budgeting, paycheck splitting — with a single **AI-native interface** handling **100%** of workflows conversationally.

LEADERSHIP

GOOGLE DEVELOPER GROUPS

El Paso, TX

Vice President of Operations

January 2024 – Present

- Grew CS department event attendance **30%** by diversifying programming into **hackathons**, **speaker series**, **industry panels**, and **resume workshops**, while leading a **10-person team** across **20+ events**.
